

Milan, the unexpected green-growing city.

7th edition

Politecnico di Milano
AUIC School
DASTU Department
November 13-17, 2017

International students are called to discover, analyse, and discuss through lectures and guided visits Milan as a city where gardens, parks, and greenery have always been part of its continuous transformation during its millenary history. Focusing on environmental design and landscape architecture techniques, this course introduces – also to students without any architectural or landscape architectural background – the relevant meaning of these multi-layered open space infrastructures inside a contemporary urban metropolis.

Milan, the unexpected green-growing city.

Day 1 – Monday, November 13th 2017

Room “Master” @ Building 12, 5th Floor,
Campus Leonardo - Via Bonardi 3
